

# Cyclic Citrullinated Peptide (CCP) Antibody (IgG)

**CPT Code:** 86200

**Order Code:** C1399

**ABN Requirement:** No

**Synonyms:** Citrullinated Peptide (CCP) IgG; CCP; Anti-Cyclic Citrullinated Peptide (CCP) Antibody IgG

**Specimen:** Serum

**Volume:** 1.0 mL

**Minimum Volume:** 0.5 mL

**Container:** Gel-barrier tube (SST, Tiger Top)

## Collection:

### Serum:

1. Collect and label sample according to standard protocols.
2. Gently invert tube 5 times immediately after draw. DO NOT SHAKE.
3. Let tube stand in a vertical position to allow blood to clot 30 minutes.
4. Centrifuge for 10 minutes.

**Transport:** Store serum at 2-8°C after collection and ship the same day per packaging instructions provided with the Cleveland HeartLab shipping box.

## Stability:

**Ambient (15-25°C):** 4 days

**Refrigerated (2-8°C):** 7 days

**Frozen (-20°C):** 30 days

**Deep Frozen (-70°C):** 30 days

**Causes for Rejection:** Specimens other than serum; improper labeling; samples not stored properly; samples older than stability limits; grossly hemolyzed or grossly lipemic specimens; microbially contaminated serum; serum containing visible particle matter; heat treated specimens

**Methodology:** Immunoassay (IA)

**Turn Around Time:** 3-4 days

**Reference Range:**

Age	Units
All Ages	<20, Negative
All Ages	20-39, Weak Positive
All Ages	40-59, Moderate Positive
All Ages	>59, Strong Positive

**Clinical Significance:** A synthetic circular peptide containing citrulline called cyclic citrullinated peptide (CCP) IgG has been found to be better at discriminating rheumatoid arthritis patients from other patients than either the perinuclear autoantibody test or the test for rheumatoid factor. Approximately 70% of patients with rheumatoid arthritis are positive for Anti-CCP IgG, while only about 2% of random blood donors and disease controls subjects are positive.

**Limitations:** The presence of immune complexes may cause false-positive results due to increased non-specific binding.
